

Medical Biochemistry
1st edition by D.S.Sheriff
Price Rs. 792/--Ic 495/-
Published by Jaypee

The author has dealt the subject in a lucid manner, in simple language and has presented the subject point by which the student can memorize the subject better. I would like to request the author to incorporate topics like, free radicals, antioxidants, super oxide metabolism, biochemistry of cancer, oncogens, muscle markers, gene therapy etc. in his next edition.

I request the author to make efforts so that text book is available at a lower price to all!

I am sure student and teachers will appreciate this gladly and accept the book on a larger rule.

Dr. Suryakant Nagtilak

Understanding Medical physiology
A Textbook for Medical Students

This book is primarily designed for students interested in knowledge of the details of physiological sciences with historical facts. The positive points of the book are easy illustrations, insets, clinical materials and simple language. Book is useful for undergraduates.

Dr. Veena Bapat

A Manual of Practical Medicine
2nd edition, 2002
by Dr. R. Alagapahan
Price Rs. 720/- Ic Rs. 450/-
Published by Jaypee Bothers

The author has dedicated this edition to his teacher Dr. M. V. Korath which itself shows how one should respect from the core of the heart one's teacher who imparts knowledge to his pupils. All the erudite persons do not leave their footprints for their future disciples. Therefore this sagacious intention should be highly appreciated. This book has made an attempt to mentor budding medicos to the art of history taking, clinical examinations, relevant laboratory investigations, bedside procedures and management. Inclusion of echocardiographic CT scan pictures has added fillip on the importance of this book. Dr. R. Alagapahan has left no stone unturned to make this book more simple, vivid and understandable.

Medical students can keep this book as a quick alternative table reference. The price is not too exorbitant and so is within the reach of all medical students.
